

Motivation of Scrum usage

We made some adjustments during the context project; sometimes because a TA recommended it, sometimes because we encountered difficulties.

Sprint #2 (May 2-4)

- Started using waffle.io as a project management tool, because it nicely shows the todo's in a Scrum-like way, and it is integrated with GitHub issues and pull requests.
- Started using points instead of hours in the sprint backlog, because it is difficult to precisely estimate the time to spend at an issue.¹

Sprint #3 (May 9-13)

- Slightly adjusted the points in the sprint backlog, which should be fitting for all issues.²
